Setup Code Password 2213 on the GD Pilot

Each compressor has a dedicated setup code that is determined by its kW, model, and pressure rating. The setup code is located on a label in the electrical panel. An example of the setup code label is shown below. The setup codes should never be mixed between different kW sizes, models, or pressure ratings.

Setup – Controller	
Setup-Code 1 :	
Setup-Code 2 :	
Setup-Code 3 :	
Ident.-Nr. 1000XXXXX (7.5 120 1 90 8 0.8)	

The GD Pilot will have three codes that will be four digits in length. It is recommended to record the setup code on the startup form when performing startup of a new unit.

If password 2213 is entered into the GD Pilot the controller will prompt for the setup codes to be entered. The controller will not allow any navigation passed this point until the setup code from the label is entered. All of the settings within the controller are also defaulted when code 2213 is entered.
